Frogtome User Guide

Opening Frogtome

Frogtome can be opened in one of two ways:

- By using one of the addon's slash commands, which without any arguments* will toggle the visibility of Frogtome (* for more info on Frogtome's slash commands, please see the Slash Command section of this user guide):
    - /frogtome
    - /ft
    - /frog
- By clicking on the minimap icon:
    - Left-clicking the minimap icon toggles Frogtome's visibility and sets its to use the expanded (normal) view.
    - Right-clicking the minimap icon toggles Frogtome's visibility and sets it to use the condensed view.

Navigation

Frogtome is broken up into different pages - each representing a different tool or group of tools. To change pages, use the buttons at the top of the window to select the desired page. Only one page may be shown at a time.

Pages can be added or removed from view by enabling or disabling them via the Settings Page. The Settings Page will always be present and cannot be hidden.

Characters Page

The Characters Page shows saved information regarding the characters on your account, all in one convenient sets of views depending on the information you want to see.

In order for the Characters Page to know about characters on your account, and to update information for a given character, you must log into that character while Frogtome is enabled. However, since the vast majority of information shown in the Characters page can only be altered when the respective character is logged in, all characters will remain up-to-date once they're known of as long as Frogtome is kept enabled.

There are four different views available for the Characters Page:

- Information: Shows basic information about each character, including the WoW Forever ruleset the character is on, the character's race, and the character's guild.
- Experience: Shows experience-related information about the character. Most notably, shows the character's last-known percentage of being capped on rested XP and the estimate time remaining until the character is capped on rested XP.
- Inventory: Show each character's inventory, regarding bag sizes and held gold.

- Professions: Show each character's professions - both primary and secondary - as far as which have been learned and what skill levels they are currently at.

Settings

Configurable settings for the Characters Page (found in the Settings Page) include:

- Whether or not only characters of the same ruleset as the current character are shown (in other words, if only PvP characters are shown when logged on a PvP character, if only RP characters are shown when logged on an RP character, etc.).
- Whether or not to use factions colors relative to the current character (in other words, for example, if to show Horde as blue and Alliance as red if logged into a Horde character).

Condensed View

In Frogtome's condensed view, the Characters Page shows the Experience view for the current character - as a nice quality-of-life check to see what the current character's rested XP progress is looking like.

Farming Page

The Farming Page shows statistics for experience/gold gains in the current play session. This provides active, real-time feedback on how progress towards experience-related and gold-related goals is going.

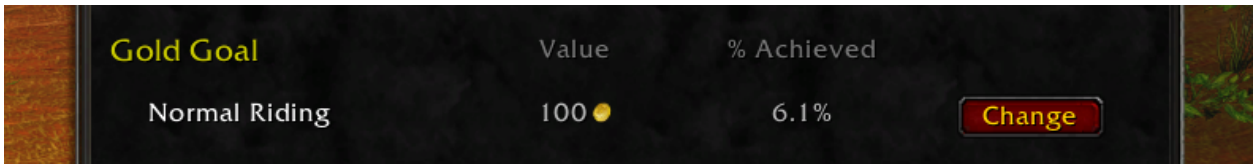

Different views for experience-related statistics and gold-related statistics can be swapped between using the “Show Gold” / “Show XP” button in the bottom-right corner.

Both views show breakdowns of experience/gold gained, labeled as “metrics”. These include total values earned (and, in the case of gold, spent) and percentage breakdowns of where earned experience/gold came from - quests or elsewhere. Included in these metrics are also the rates at which more experience/gold has been earned this session.

Both views also share details regarding the current character’s quests within their quest log, showing data for quests currently ready to turn in (as “current completed”) and data for all quests within the log (as “total possible”). For experience specifically, this includes the calculated resulting level/percentage should all of each category of quests be turned in.

Specific to experience, the Farming page shows averages for the amount of experience gained from quests and gained from elsewhere. Using these averages, the expected number of quests/otherwise needed to level is displayed.

Specific to gold, a Gold Goal can be set for the current character, showing the about of gold needed to complete the goal and the current character's progress toward that goal.

At the bottom of the Farming page, the session duration is displayed alongside "Time to Level" for experience, as the estimated time to reach the next level given the rate of gained experience, and "Net Gold" for gold, as the net amount of gold earned this session.

The session can be paused using the "Pause" button, turning the session time red to signify that the session is not currently active. While the session is paused, no experience or gold events are tracked and will not be included in session data. The session can also be reset using the "Reset" button, removing all session data and resetting the session time to zero.

Settings

Configurable settings for the Farming Page (found in the Settings Page) include:

- Whether or not quest data shown in the Farming Page should be limited to tracked quests only or, instead, all quests in the quest log.

Condensed View

In Frogtome's condensed view, the Farming Page shows abbreviated versions of the page for both experience and gold.

Questing Page

The Questing Page is a work-in-progress page included in v1.0.0 but requires more discovered data in WoW Forever to be fully functional. While it has been made available for testing purposes, it is not presently recommended for use.

Notes Page

The Notes Page shows notes that can be typed and saved for later reference.

Two different types of notes exist:

- Account Notes: Notes that are account-wide, shared across all characters.
- Character Notes: Notes that exists only for the current character.

Account notes can be useful for things like profession-related shopping lists, where materials from many different characters might need to be collected for and sent to one specific character, or general notes/reminders that are useful regardless of what character you're on. Character notes can be useful for things like planned talents or BiS requirements, things that are only relevant for individual characters and that you likely only need to see depending on which character you're logged in on.

Condensed View

In Frogtome's condensed view, the Notes Page is dramatically shortened to take as little space as possible.

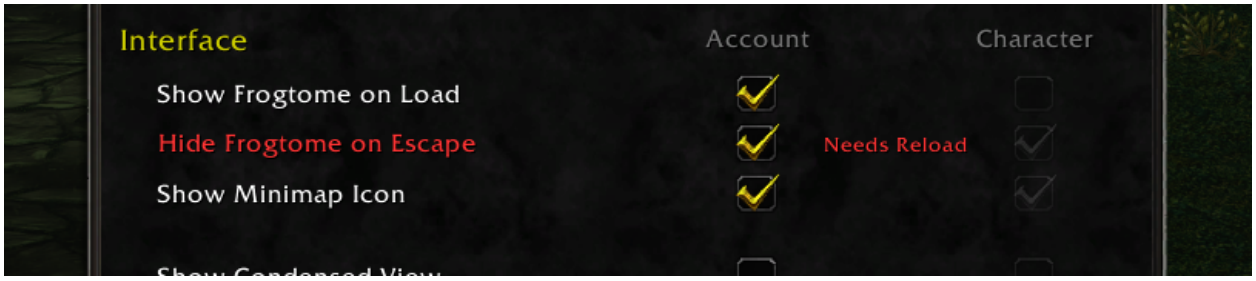

Settings Page

The Settings Page shows all configurable settings for Frogtome.

Depending on their effect, settings can be configued to be either account-wide or character-specific. If a setting can be character-specific, use of its character-specific value (and all values of all other character-specific settings) relies on enabling “Enable Character-Specific Settings”.

Some changed settings can only be applied by reloading the interface (using /reload). Such settings, when edited such that a reload is required, will turn red and display a “Needs Reload” message signifying that the change is not yet effective.

Settings can be reset to their default values using the “Reset to Default Settings”.

Settings

Outside of page-specific settings mentioned in earlier sections of this user guide, notable settings include:

- Whether or not to show Frogtome’s welcome message upon loading in.
- Whether or not to show “‘fun’ facts” - a fun side feature that shows a random blurb of information in the chat window every 15 minutes.
- Whether or not Frogtome is show automatically upon loading lin.
- Whether or not Frogtome is hidden when pressing Escape (ESC), similar to most other windows in World of Warcraft.
- Whether or not a minimap icon is shown for Frogtome.
- Whether or not the condensed view is shown for Frogtome.

Condensed View

In Frogtome’s condensed view, the Settings Page shows the setting that toggles the condensed view. This allows for easily toggling out of the condensed view.

Slash Commands

Frogtome offers slash command support with optional arguments. These arguments can be used to dictate certain interface-related changes for Frogtome, including:

- Optional arguments to show/hide Frogtome.
- Optional arguments to navigate to specific pages (and, for applicable pages, views within those pages).
- Optional arguments to change to the expanded (normal) or condensed views.

Multiple different arguments may be used at once; a slash command like “/ft show condensed page farming xp” will do the following things, all in one command:

- Show Frogtome.
- Change Frogtome to the condensed view.
- Navigate to the Farming Page and show the XP view within the page.

The use of arguments, like shown in this example, allow for Frogtome to be, among other things, very macro-able; with the press of a single macro, Frogtome can appear exactly how you want it for whatever application you might want to use it for.

Feedback, Suggestions, and Bug Reporting

Feedback is always welcome, suggestions will absolutely be taken into consideration, and the reporting of any bugs is humbly requested and encouraged.

You may contact me - Froey, the developer of this addon - at my Discord handle @froey with any feedbacks, suggestions, or bug reports. I may not respond to each and every communication, but I thank you in advance for making the communication.
